Press Release

 EDITION

“The Missing Book”, a **key** to the realm of Artlantis

Abvent is proud to announce the publication of the first guide book to Artlantis “The Missing Book”, the English version of the Italian “*Artlantis R e Studio, guida all' uso*”.

Artlantis, the radiosity and raytracing software with super intuitive UI developed by Abvent, has its own community of passionate users who dedicated their efforts on the ArchiRADAR website, one of Artlantis fellow.

This handbook is born from the decade experience of the authors (Roberta Cecchi, Roberto Corona, Daniele Raggi and Pietro Spampatti), matured in the daily use of the program at a professional level and in their share of knowledge as official Abvent beta-testers.

“The Missing Book” addresses not only the first time users of Artlantis, but it is meant also to inspire the expert ones. Besides the explanation of the individual program commands and tools, it also delves into the purpose of each function through practical use, and moreover provides useful ideas and recommendations on how to maximise program implementation.

The Tips&Tricks section delivers a great number of operative suggestions and tips. It has been issued by a users group actively participating in the ArchiRADAR forums for years, sharing their experience and professional skills and showing each other suggestions and tutorials.

“The Missing Book” is the perfect companion for your walk into the world of Artlantis.

“The Missing Book” will be available in February 2007 at www.objectsonline.com and trough Abvent network of worldwide distributors. Price \$49.
